

ARGOSY CASINO BULKHEAD LAWRENCEBURG, INDIANA Argosy Gaming Company

The facility in Lawrenceburg, Indiana has been expanded with a larger, second riverboat casino. PND designed a unique bulkhead to create a new slip for the larger floating casino, while keeping the original one in service. The OPEN CELL SHEET PILE system was used to create a 30-ft wide "back-to-back" wall between the existing slip and the new slip resulting in a more cost effective wall system than a closed cell system or combi wall. The new slip is 250 ft by 500 ft and entailed 2,000 lineal feet of steel sheet wall driven through the silt and clay soils. The sheetpiles were driven prior to dredging of the new slip.
